

Date: 28 June 2024

Day: Friday

Learning Objectives:

- Understand how to parse incoming request data in Express.js.
- Learn to handle different data formats, including JSON, URL-encoded, and multipart/form-data.

Overview:

Day 18 focused on parsing incoming requests, a critical step in processing and utilizing data sent by clients. This included handling various data formats and managing file uploads.

Activities:

- Request Body Parsing:
 - Implemented middleware to parse JSON and URL-encoded data from request bodies, essential for form submissions and API requests.
- Handling Multipart Data:
 - Used middleware like multer to manage file uploads, demonstrating how to handle multipart/form-data for file uploads.

Insights:

- Accurate parsing of request data ensures effective processing and utilization of client-submitted information.
- Handling file uploads and diverse data formats is crucial for supporting various client interactions.
