Date: 29 June 2024   **Day: Saturday**

Learning Objectives:

- Learn to use the Express Router to modularize route management.
- Understand how to create and manage modular route handlers.

Overview:

Day 19 introduced the Express Router, a powerful tool for organizing and managing
routes in a modular fashion. This approach enhances code maintainability and scalability.

Activities:

- Router Basics:
  ○ Explored how to create and utilize routers for different application sections, such as user and product routes.
- Modular Routing:
  ○ Implemented routers to manage routes in a modular manner, improving code organization and readability.

Insights:

- The Express Router is essential for managing complex route structures and modularizing route handling.
- Modular routing improves code maintainability by separating concerns and simplifying route management.
